

AUGUSTA

A match for winter.

Benefits

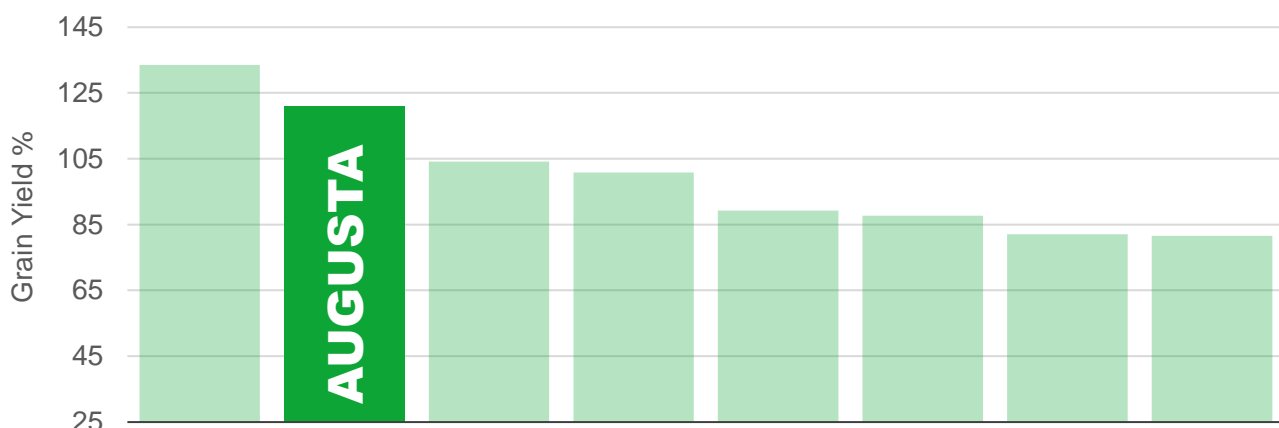

- ✓ Alternative in regions with risk of early summer drought.
- ✓ Proven winter hardiness in all locations.
- ✓ Mid-high grain and protein yield.
- ✓ Compact growth type with high lodging resistance for low-loss harvest.

Classification based on German Federal Plant Variety Office 2023 and own observations.

AUGUSTA: An option for risk diversification.

In regions with increased early summer drought, AUGUSTA is a real alternative to spring beans. The risk of a total loss of the (spring) bean can be partially compensated and the risk spread as AUGUSTA can take full advantage of the winter moisture and has an earlier plant development.
