

LACROSS

Tannin-free biomass for various uses.

Benefits

- ✓ High biomass yield after rapid youth development.
- ✓ Semi-leafless growth type significantly increases the standability and makes harvesting easier.
- ✓ Lower TGW reduces sowing costs and mixes well with cereals for sowing.
- ✓ Effective weed suppression, suitable for mixed cultivation for green harvesting or threshing.

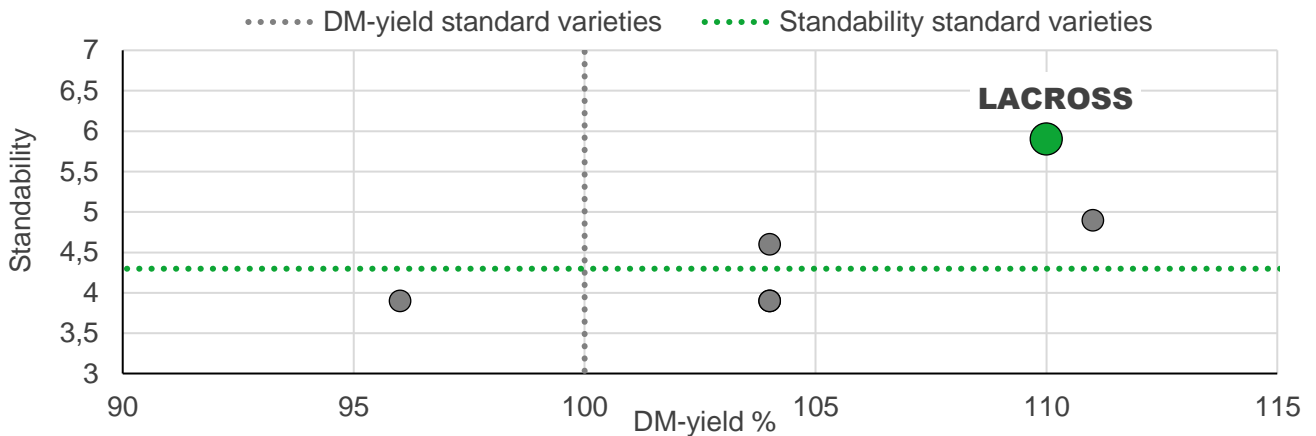

- 7 Dry matter yield
- 6 Youth biomass
- 8 Standability

Classification based on German Federal Plant Variety Office 2023 and own observations.

LACROSS: Effectiveness above and below the topsoil.

LACROSS combines high dry matter yields with significantly improved standability, resulting in easy harvesting and high forage quality.

Source: Federal plant variety office, Germany. Official trials average 2016 and 2017.
 Standard varieties = Livioletta, Florida / DM-yield rel. 100% = 27dt/ha 9 locations
 Standability calculated from lodging-score: 13 locations
